## 4. RESPONSIBILITIES

1) Manage the development of the IT strategy and long term strategic roadmap as directed by IT leadership of Dolphin energy UAE and Qatar, ensuring alignment to Dolphin Energy's overall business strategy to support achievement of defined business and strategic objectives.
2) In conjunction with the IT Directors and in collaboration with other IT functions, lead the implementation of the overall IT strategy, long term roadmap and business plans across all IT functions in line with Dolphin Energy's vision, mission and corporate objectives. Ensure that the IT strategy is translated into functional operational business plans and ensure the monitoring of performance during the course of the year through the IT Project Management Office in collaboration with IT leadership of Dolphin Energy UAE and Qatar.
3) Manage the conceptualization, planning and development of IT architecture in line with business requirements as per industry best practices. Ensure effective maintenance of the as-is IT architecture design and IT documentation up to date.
4) Manage the effective liaison with related IT functions to obtain input for developing IT architecture specifications. Ensure that all aspects of the specified architecture principles and standards are communicated effectively across functions to facilitate awareness and adherence to defined guidelines while promoting processes related to architecture, outcomes and results.
5) Manage, plan and define quality related key performance indicators (KPIs), performance monitoring and reporting for IT processes to aid the assessment of performance on all quality aspects.
6) Review and consolidate annual plans and budgets produced by all IT units, while leading the effective coordination with all units on aggregating required financial information for developing the annual budget.
7) Lead the evaluation of business requirements, review of business cases and the preparation of the IT operating and capital expenditure budgets, in-line with annual business plans; and forward to IT Directors for review and approval.
8) Manage the IT Project Management Office; develop, seek approval and manage the implementation of IT project management methodology and quality standards whilst ensuring timely project monitoring as well as communication to all stakeholders in order to facilitate effective project management and achievement of IT program objectives.
9) Lead the development of Dolphin Energy's IT service management processes, including Service Level Agreements (SLAs) and Operational Level Agreements (OLAs) between Dolphin Energy IT with regards to all IT services, ensuring alignment to corporate guidelines and ensuring collaboration within all IT entities and with business functions across Dolphin Energy.
10) Oversee the timely conduct of quality audits in order to formally assess the IT performance in accord with defined quality parameters; manage IT compliance with all defined standards as established by Internal Audit and Information Security as well as industry best practices to facilitate achievement of IT operational excellence.
11) Lead and guide the development of methodology, systems to ensure effective data intelligence management to support organizational operations and assure quality and integrity of data across Dolphin Energy. Ensure preparation of management information reports and analysis as required.
12) Provide overall management and guidance to the IT Operations Downstream team as well as the outsourced IT services to ensure successful service delivery in alignment with agreed SLAs, in line with IT strategy and with Information Security requirements.
13) Manage execution of IT outsourcing services across all Dolphin Energy UAE locations; ensure effective monitoring of performance of outsourced service providers to achieve satisfactory provision of services, optimize contracts and procurement arrangements as well as relationship with suppliers to optimize purchased cost and delivered quality. Ensure effective provision of IT systems operations for application support deployment and assure infrastructure services availability and efficiency to support uninterrupted operations.
14) Manage and maintain service catalogue for IT Operations Downstream in line with the Corporate IT strategy and business requirements.
15) Lead and develop the process to consult and communicate with users to determine and clarify their current and future operational business needs; manage the design, enhancement and implementation of IT infrastructure (in line with IT strategy and roadmap) to meet business requirements.
16) Manage the development, review cycle and recommend enhancements to policy and procedures related to IT operations management and lead the implementation of procedures and controls covering all areas of downstream IT operations management and administration activity to ensure adherence and effective implementation. Ensure all major systems, networks and hardware are operated and maintained cost-effectively, and meet defined service levels and standards,
17) Manage delivery of Security Operations Center services in coordination with Information Security team and lead the implementation and testing of disaster recovery plans as required to safeguard and protect all IT operations.
18) Plan and manage the corporate IT service desk as a single point of contact and lead the development and maintenance of formal procedures for providing support to all IT users in order to ensure timely and efficient resolution of all IT and communication related issues.

19) Monitor and analyze IT training needs and liaise with the HR function to provide appropriate training provision so that all employees have the required IT user capability to enable delivery of business objectives. Ensure that required training and documentations are provided for the support staff on received updates and fixes for both applications and infrastructure.
20) Perform other similar or related duties as required or assigned by senior management
